

# Infrastructure You Can Rely On!

*The big difference between Cloud Propeller and other service providers is that they are willing to tailor their services for each customer. No one else was willing to do that. Before working with CP, our risk level was high. Now, we have a secure infrastructure, we have a plan, we are organized and we are prepared.*

**Director of IT Services  
Dynalab, Inc.**

*Cloud Propeller was uniquely qualified to understand and deliver on a solution for Ohio Christian University. We needed a backup and disaster recovery system that met our specific needs. Because of their familiarity with and use of the OARnet system, the Dublin data center, and related fiber backbone, we know we're protected, and the CP team has become an extension of our department.*

**John Bocook, Assistant  
Vice President of IT Services  
Ohio Christian University**

*Cloud Propeller took the time to get to know us and our product and gave us a solution that was flexible enough to meet our needs, which in turn allowed us to be nimble enough to quickly respond to changing requirements. CP is more of a partner than a vendor.*

**Bud Budrejko, Lead Systems  
Engineer D0media, LLC**

## About Cloud Propeller

Over the past 10+ years Cloud Propeller has helped countless businesses, community organizations, and academic institutions improve performance, maximize security, save money, enhance productivity, and streamline IT operations vital to success.

Cloud Propeller is known for its ability to understand complex business challenges and for creating customized solutions that work.

## The Cloud Propeller Difference

- Willingness and ability to provide customized, tailored solutions
- Technical expertise to build enterprise-grade infrastructure
- Responsive, tier four cloud engineers answering every service call
- Always up-to-date, company-owned equipment housed at multiple data centers
- A guaranteed three-year refresh cycle provided at no additional charge

## Cloud Propeller Services

### Infrastructure as a Service (IaaS)

Tailored, highly-secure, VMware-based infrastructure solutions using the newest, best-in-class hardware and multiple data center locations built to exceed client needs and expectations.

### Backup as a Service (BaaS)

Backup and replication solutions provided by Veeam, the recognized leader in backup, provide infinite flexibility to create custom data-protection solutions able to meet even the most stringent RPOs.

### Disaster Recovery as a Service (DRaaS)

For mission-critical applications with extreme uptime and recovery time constraints, our Zerto-powered platform provides RTOs and RPOs measured in minutes; perfect for protecting both cloud-to-cloud, and on-prem-to-cloud infrastructure.

### Virtual Desktop Infrastructure (VDI)

VDI gives employees at every level of the organization the familiar look and feel of a desktop using any PC, Mac or tablet so they can maintain productivity and compliancy from any geographical location with maximum security and data-loss protection.

## Our Story

Co-founded by Petar Smilajkov with a group of infrastructure engineers, Cloud Propeller was born from a commitment to providing an exceptional customer experience, the newest hardware, and real-time access to cloud engineers for support.

Cloud Propeller provides enterprise-grade infrastructure services for medium and large organizations – Powered by VMware vSphere / NSX / vCloud Director, Veeam, Palo Alto Networks and Zerto, and three independent data centers in Dublin, Columbus and Cleveland.
